

## Mathematical Questions and Solutions Volume 21

Filesize: 8.77 MB

### ***Reviews***

*These kinds of ebook is the perfect publication offered. It is among the most incredible publication i have go through. You will not feel monotony at whenever you want of your time (that's what catalogues are for concerning if you check with me).*

## MATHEMATICAL QUESTIONS AND SOLUTIONS VOLUME 21

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1874 Excerpt: .M.A.)--A triangular frame ABC without weight is kept in equilibrium by three forces at right angles to the sides whose lines of action meet in a point L. O is the centre of the circle ABC, LO is produced to L so that  $OL = LO$ ; prove that the stresses at A, B, C will be perpendicular and proportional to  $LA, LB, LC$ . Solution by John C. Malet, M.A. From L draw the perpendiculars  $LA, LB, LC$ , and from L draw the perpendiculars  $LD, LE, LF$ , on the sides of the frame. Now if P, Q, R be the three forces, since they act perpendicularly to the sides of the triangle they must be proportional to them; therefore  $P:Q:R = BC:CA:AB$ . (1.) Let the stress at A= $X$ , and let it act along the line AA'; then for the equilibrium of the bar AC, taking moments about C, we have  $X \cdot AC \cdot \sin A'AC = Q \cdot GC$  and for AB,  $X \cdot AB \cdot \sin A'AB = R \cdot HB$ , from which by (1) we have  $\sin A'AC \cdot GC = \sin A'AB \cdot HB$  therefore AA' must be perpendicular to AB; similarly the stresses at B and C are perpendicular to BL, CL, which proves the first part of the question. Let Y and Z be the stresses at B and C. We have now the bar AB in equilibrium under...
